PREMIUM ADVANCED CALCULATPOR

Submitted by : Tinkal Sonkar

Technology used : python, Tkinter

INTRODUTION & PROJECT OBJECTIVE

- Developed using python programming.
- Performs basic and scientific calculations.
- Offer a simple and user – friendly interface.
- Saves calculation history.
- IDF visual studio code.

OBJECTIVE: To develop a multifunctional calculator that makes calculations easy and fast.

FEATURES OF THE CALCULATOR

- Basic calculator – additions, subtraction, multiplication, division.
- Scientific calculator – sin, cos, tan, log pi.
- Financial calculator- EMI, loan and interest.
- GST calculator – GST calculation.
- Calculation history- stores previous calculations.

LIBRARIES, FORMULAS & TECHNOLOGY

:Libraries used

- Tkinker- created GUI interface.
- Math – performs mathematical operation.
- TTK – provides advance GUI widgets.
- Key features – using to mouse and keyboard.

TECHNOLOGY : PYTHON PROGRAMING LANGUAGE .

CONCLUSION &FUTURE SCOPE

Conclusion:

- Successfully developed a multifunctional calculator.
- Provides scientific and financial calculations.
- Saves time reduce manual calculations.
- Easy to use and user- friendly.

FUTURE SCOPE:

- More advanced features.
- Improved user interface.
- Better calculations history management.

THANK YOU
